SQLHAU

We understand that when you consider a request for training, you need to ensure that your training budget is well spent. The class should make each student better equipped to do their job. You not only want them to know how to do things, but also understand why so they can troubleshoot problems and possibly train others.

This is why you or your employees should train with SQLHAU®.

LEARN FROM THE EXPERTS WHO TEACH OTHER EXPERTS

Many Microsoft Data Platform MVPs have paid to attend our classes as well as events taught by Allan Hirt, himself a dual Microsoft MVP and VMware vExpert. Allan was an instructor for rotations of the SQL Server Microsoft Certified Master classes. When the world's SQL Server experts and Microsoft themselves come to us, you know your employees are training with the right company.

"Having Allan's last books … on my shelf for years … I was well aware of his knowledge with SQL Server failover and knew the course would cover a fair amount of information. Slides were kept to a minimum with lots of discussion of HA topics that a lot of in the trenches DBAs don't really consider."
Stuart Moore

YOU NEED REAL WORLD EXPERIENCE. WE TEACH IT.

"Thanks for the great session today @SQLHA lots of stuff I can use when I get back to work"
John Rutherford

There are consultants and there are trainers. SQLHAU® combines these worlds to deliver training by instructors who not only plan and implement solutions for customers, but love to pass on their knowledge so you can be successful. We take our real world experience and teach skills that can be put to use immediately. Our classes are not just about SQL Server; we discuss the entire stack, which may include Windows Server, SQL Server, networking, security, storage, and more. So whether a DBA or a system administrator is attending, they will learn from our classes.

WE HELP YOU KEEP UP WITH THE LATEST INFORMATION

We not only prepare students for today; we also prepare students for tomorrow. Understanding product and technology roadmaps is not easy. We participate in early adopter programs for both Windows Server and SQL Server and help customers implement cutting edge technologies. With that experience, we can ease the pain of deploying these new platforms and ensure your staff is armed with what they need to be successful with currently supported platforms as well as what is coming down the road.

SQLHAU

HANDS-ON EXPERIENCE MATTERS

At SQLHAU®, we believe that to truly learn, students need more than just instruction. Hands-on practice gives students the confidence to be able to actually put into practice everything they learn once they come home. This is why most of our classes have hands-on labs that are created specifically by us to reinforce the lessons being taught. Some classes even have multiple levels of labs within the same course to accommodate people at different ends of the experience spectrum.

"The class was especially useful with the web based labs which had fully working Virtual Machines … and allowed for three levels of challenges. I thought this concept was great because I could redo the lab later using a different method which means I could improve my skills further outside the class room."

The SQL Pro

"When I attend training I prefer labs that require thought when problems arise. These labs were challenging and provided the building blocks needed to build, troubleshoot, and maintain the WSFC."

Daryl Roche

THE RETURN ON INVESTMENT FOR SQLHAU®

"Best session ever! Addressed many pain points in design and implementation. Thanks!"

Zhen Zang

The benefit of a well-trained staff is that they can plan, deploy, and maintain your systems based on best practices to avoid costly problems and downtime. By sending your people to SQLHAU®, you can break the cycle of being reactive and, with the skills they learn, become more proactive and efficient.
